SUBJECT INDEX

Ab initio calculations
An experimental/theoretical comparison of the non-resonant multiphoton ionization fragmentation mechanisms for small heterocycles and the analogous acyclic molecules 1
Adiabatic invariant
Stable confinement in an azimuthally asymmetric FTICR ion trap 39
Appearance energy
Production and identification of saturated hydrocarbon cluster dications 147
Appearance size
Production and identification of saturated hydrocarbon cluster dications 147
Asymmetric Penning trap
Stable confinement in an azimuthally asymmetric FTICR ion trap 39
Atomic weight
The absolute isotopic composition of europium 95
Atoms
A semiclassical approach to the calculation of electron impact ionization cross-sections of atoms: from hydrogen to uranium 127

Biomolecules
Models for matrix-assisted desorption by a laser-pulse 25

Carbenium ions
Trimethylsilylazide, an efficient trap for gaseous carbenium ions. The "azide-clock" in the gas phase 59
Concentration enrichment
Concentration enrichment in the ion source of a pulsed electron beam high pressure mass spectrometer 47
Coulombic explosion
Fragmentation of high-energy ionic hydrogen clusters by single collision with helium 141
Cross-sections
A semiclassical approach to the calculation of electron impact ionization cross-sections of atoms: from hydrogen to uranium 127
Cyclotron
Linear excitation and detection in Fourier transform ion cyclotron resonance mass spectrometry 169
Off-axis injection into an ICR ion trap: a means for efficient capture of a continuous beam of externally generated ions 75

Desorption
Models for matrix-assisted desorption by a laser-pulse 25
Detection
Linear excitation and detection in Fourier transform ion cyclotron resonance mass spectrometry 169
DM approach
A semiclassical approach to the calculation of electron impact ionization cross-sections of atoms: from hydrogen to uranium 127
Double-charge-transfer spectroscopy
Double-ionization energies to singlet and triplet electronic states of the acetaldehyde dication measured by double-charge-transfer spectroscopy 163
Double-ionization energies
Double-ionization energies to singlet and triplet electronic states of the acetaldehyde dication measured by double-charge-transfer spectroscopy 163
Doubly-charged cluster ions
Production and identification of saturated hydrocarbon cluster dications 147

Electron impact ionization
A semiclassical approach to the calculation of electron impact ionization cross-sections of atoms: from hydrogen to uranium 127
Production and identification of saturated hydrocarbon cluster dications 147
Europium
The absolute isotopic composition of europium 95
Excitation
Linear excitation and detection in Fourier transform ion cyclotron resonance mass spectrometry 169

External ion source
Off-axis injection into an ICR ion trap: a means for efficient capture of a continuous beam of externally generated ions 75

Fourier
Off-axis injection into an ICR ion trap: a means for efficient capture of a continuous beam of externally generated ions 75
Fourier transform
Linear excitation and detection in Fourier transform ion cyclotron resonance mass spectrometry 169
Fourier transform mass spectrometry
Stable confinement in an azimuthally asymmetric FTICR ion trap 39
Fragmentation phenomena
Fragmentation of high-energy ionic hydrogen clusters by single collision with helium 141
FT-ICR
Off-axis injection into an ICR ion trap: a means for efficient capture of a continuous beam of externally generated ions 75
FTMS
Linear excitation and detection in Fourier transform ion cyclotron resonance mass spectrometry 169
Off-axis injection into an ICR ion trap: a means for efficient capture of a continuous beam of externally generated ions 75

Gas flow dynamics
Concentration enrichment in the ion source of a pulsed electron beam high pressure mass spectrometer 47
Gas phase
Trimethylsilylazide, an efficient trap for gaseous carbenium ions. The "azide-clock" in the gas phase 59

H_2^+
Measurement of the reaction rate coefficients of reactions of H_2^+ with Ne, Ar, Kr, Xe, H_2, D_2, N_2 and CH_4 at thermal energy 15
High pressure mass spectrometry
Concentration enrichment in the ion source of a pulsed electron beam high pressure mass spectrometer 47
High-energy cluster collision
Fragmentation of high-energy ionic hydrogen clusters by single collision with helium 141
Hydrocarbon clusters
Production and identification of saturated hydrocarbon cluster dications 147

ICR
Linear excitation and detection in Fourier transform ion cyclotron resonance mass spectrometry 169
Off-axis injection into an ICR ion trap: a means for efficient capture of a continuous beam of externally generated ions 75
Ion drift experiment
Photodetachment from anions in a drift cell. Application to SF_6^- at 337 nm 103
Ion/molecule reaction
The classical Langevin rate constant for ion/molecule capture: when, if at all, is it constant? 155
Ion/molecule reactions
Ion/molecule reactions leading to WF_n^+ ($n = 1$–5): implications for the mechanisms of ion/surface reactions 87
Measurement of the reaction rate coefficients of reactions of H_2^+ with Ne, Ar, Kr, Xe, H_2, D_2, N_2 and CH_4 at thermal energy 15
Trimethylsilylazide, an efficient trap for gaseous carbenium ions. The "azide-clock" in the gas phase 59
Ion/surface reactions
Ion/molecule reactions leading to WF_n^+ ($n = 1$–5): implications for the mechanisms of ion/surface reactions 87
Ion optics
Off-axis injection into an ICR ion trap: a means for efficient capture of a continuous beam of externally generated ions 75
Ion trap
Off-axis injection into an ICR ion trap: a means for efficient capture of a continuous beam of externally generated ions 75
Ionic hydrogen clusters
Fragmentation of high-energy ionic hydrogen clusters by single collision with helium 141
Isotope mass spectrometry
Studies on the evaporation and ionisation behaviour of uranium and plutonium in thermal ionisation mass spectrometry 111
Isotopic abundance
The absolute isotopic composition of europium 95

Langevin capture rate constant
The classical Langevin rate constant for ion/molecule capture: when, if at all, is it constant? 155

Magnetron motion
Stable confinement in an azimuthally asymmetric FTICR ion trap 39
Matrix-assisted desorption
Models for matrix-assisted desorption by a laser-pulse 25

Multiphoton ionization
An experimental/theoretical comparison of the non-resonant multiphoton ionization fragmentation mechanisms for small heterocycles and the analogous acyclic molecules 1

Overbarrier reflection
The classical Langevin rate constant for the ion/molecule capture: when, if at all, is it constant? 155

Photodetachment
Photodetachment from anions in a drift cell. Application to SF_6^- at 337 nm 103
Plutonium
Studies on the evaporation and ionisation behaviour of uranium and plutonium in thermal ionisation mass spectrometry 111
Proton transfer
Measurement of the reaction rate coefficients of reactions of H_2^+ with Ne, Ar, Kr, Xe, H_2, D_2, N_2 and CH_4 at thermal energy 15

Radiolysis
Trimethylsilylazide, an efficient trap for gaseous carbenium ions. The "azide-clock" in the gas phase 59
Reaction rate coefficients
Measurement of the reaction rate coefficients of reactions of H_2^+ with Ne, Ar, Kr, Xe, H_2, D_2, N_2 and CH_4 at thermal energy 15

Selected ion tube flow
Measurement of the reaction rate coefficients of reactions of H_2^+ with Ne, Ar, Kr, Xe, H_2, D_2, N_2 and CH_4 at thermal energy 15

SF_6^-
Photodetachment from anions in a drift cell. Application to SF_6^- at 337 nm 103
Structure determination
An experimental/theoretical comparison of the non-resonant multiphoton ionization fragmentation mechanisms for small heterocycles and the analogous acyclic molecules 1

Theoretical formula
A semiclassical approach to the calculation of electron impact ionization cross-sections of atoms: from hydrogen to uranium 127
Thermal ionization
Studies on the evaporation and ionisation behaviour of uranium and plutonium in thermal ionisation mass spectrometry 111
The absolute isotopic composition of europium 95
Trimethylsilylazide
Trimethylsilylazide, an efficient trap for gaseous carbenium ions. The "azide-clock" in the gas phase 59
Tungsten fluorides
Ion/molecule reactions leading to WF_n^+ ($n = 1$–5): implications for the mechanisms of ion/surface reactions 87
Tunnelling
The classical Langevin rate constant for ion/molecule capture: when, if at all, is it constant? 155

Uranium
Studies on the evaporation and ionisation behaviour of uranium and plutonium in thermal ionisation mass spectrometry 111
